AB Process of oxidizing o-nitrotoluene in the side chain, by means of manganese dioxide and sulphuric acid, to o-nitrobenzaldehyde, as well as to carbon dioxide with excess of o-nitrotoluene, characterized by operating above 100.degree. and preferably in closed vessels. By variation in the concentration of the sulphuric acid, the principal product may be either o-nitrobenzaldehyde or o-nitrobenzoic acid, the former prevailing at 30-45.degree. B.acte.e., and the latter at 46-60.degree. B.acte.e. concentration of acid.
