Example: Plant species and model organism *Nicotiana benthamiana* in CPlus

=> e **Nicotiana benthamiana+all/ct**

```
E1          6228      BT9  Organisms/CT
E2          22128     BT8  Eukaryota/CT
E3          78047     BT7  Plantae/CT
E4           153      BT6  Spermatophyta/CT
E5          4183      BT5  Magnoliophyta/CT
E6          4674      BT4  Magnoliopsida/CT
E7           55       BT3  Solanales/CT
E8          3561      BT2  Solanaceae/CT
E9          1268      BT1  Nicotiana/CT
E10         11066     --> Nicotiana benthamiana/CT
. . .
```

Enter the taxonomy at the genus level in CAplus

Check which tobacco species are discussed most

=> e **Nicotiana+nt/ct**

```
E15      1268  --> Nicotiana/CT
        NOTE This heading is used for studies of the genus
        Nicotiana and unidentified species. Commercial tobacco
        crop is indexed at Nicotiana tabacum, unless otherwise
        indicated in the document.
E16      8     NT1  Nicotiana acaulis/CT
E17     23     NT1  Nicotiana acuminata/CT
E18      5     NT2  Nicotiana acuminata multiflora/CT
. . .
E28     11066 NT1  Nicotiana benthamiana/CT
. . .
E111    45353 NT1  Nicotiana tabacum/CT
E112     1     NT2  Nicotiana tabacum aurea/CT
E113     0     NT2  Nicotiana tabacum gossii/CT
E114     0     NT2  Nicotiana tabacum macrophylla/CT
E115     0     NT2  Nicotiana tabacum paraguay/CT
E116     42     NT2  Nicotiana tabacum samsun/CT
E117     1     NT2  Nicotiana tabacum trapezond/CT
E118    124     NT2  Nicotiana tabacum xanthi/CT
. . .
```

CTs in CAplus are indexed on the highest level of specificity and **there's no automatic up-posting**.

I.e. the genus *Nicotiana* has less records compared to the prominent model organisms *N. benthamiana* and *N. tabacum*.

Two species are highly discussed: *N. benthamiana* and *N. tabacum*

Search thesaurus terms using relationship codes in CPlus

=> e **Nicotiana benthamiana**+all/ct

```

The Embase Emtree thesaurus has incorporated an extended version of Medline's medical subject headings. For the genus *Nicotiana*, the two most prominent species are indexed.

Use Case 1: Find publications related to the DXR target of antibiotic-resistant pathogen *Acinetobacter baumannii*

```
=> index bioscience -uspatfull -uspat2 -ifiall -genbank
```

```
INDEX 'ADISCTI, ADISINSIGHT, ADISNEWS, AGRICOLA, ANABSTR, BIOSIS,...'  
38 FILES IN THE FILE LIST IN STNINDEX
```

```
=> s (acinetobacter baumannii# or A baumannii#) and (dxr or 1-deoxy-D-xylulose-5-  
phosphate reductoisomerase or 1.1.1.267) not p/dt
```

```
. . .  
=> D rank  
F1          7    CAPLUS  
F2          5    EMBASE  
F3          5    SCISEARCH  
F4          3    BIOSIS  
F5          3    MEDLINE  
F6          3    REAXYSFILEBI  
F7          1    CABA  
F8          1    DDFU  
F9          1    DRUGU  
F10         1    TOXCENTER  
F11         1*   ADISINSIGHT
```

Open relevant biomedical databases in the INDEX environment using the bioscience cluster

Send query. Search at least the full name and its typical abbreviation. Rank results by file

We will perform the actual search in the top 5 databases. . .

Use Case 1: Find publications related to the DXR target of antibiotic-resistant pathogen *Acinetobacter baumannii*

```
=> fil caplus Embase medline biosis scisearch
```

Open files acc. to priority

```
. . .
```

```
=> s (acinetobacter baumannii# or A baumannii#) and (dxr or 1-deoxy-D-xylulose-5-phosphate  
reductoisomerase or 1.1.1.267) not p/dt
```

Send the search again

```
L2          7 FILE CAPLUS  
L3          5 FILE EMBASE  
L4          3 FILE MEDLINE  
L5          3 FILE BIOSIS  
L6          5 FILE SCISEARCH
```

```
TOTAL FOR ALL FILES
```

```
L7          23 (ACINETOBACTER BAUMANNII# OR A BAUMANNII#) AND (DXR OR 1-DEOXY-D-X  
YLULOSE-5-PHOSPHATE REDUCTOISOMERASE OR 1.1.1.267) NOT P/DT
```

```
=> dup rem 17
```

```
L8          12 DUP REM L7 (11 DUPLICATES REMOVED)  
            ANSWERS '1-7' FROM FILE CAPLUS  
            ANSWERS '8-9' FROM FILE EMBASE  
            ANSWER '10' FROM FILE BIOSIS  
            ANSWERS '11-12' FROM FILE SCISEARCH
```

Duplicate remove eliminates most of the duplicates

Use Case 1: Find publications related to the DXR target of antibiotic-resistant pathogen *Acinetobacter baumannii*

=> d bib hit 1-tot

CAPLUS

TI Corrigendum: Prioritizing multiple therapeutic targets in parallel using automated DNA-encoded library screening [Erratum to document cited in CA169:459705]
IT Animal gene
RL: BSU (Biological study, unclassified); BIOL (Biological study) (Dxr; prioritizing multiple therapeutic targets in parallel using automated DNA-encoded library screening (Erratum))
IT *Acinetobacter baumannii*

Example hits from the remaining 4 databases

The CAPLUS text modifier lists the relevant target

EMBASE

TI Analysis of drug binding pockets and repurposing opportunities for twelve essential enzymes of ESKAPE pathogens.
CT Medical Descriptors: *Acinetobacter baumannii* amino acid sequence
CT Drug Descriptors: 1 deoxy d xylulose 5 phosphate reductoisomerase: EC, endogenous compound

Embase CTs names the species and target

Use Case 2: Find publications related to a specific bacterial strain: Ab5075

```
=> index bioscience
```

```
. . .  
=> s (Ab5075 or Ab 5075) not (Ab5075 or Ab 5075)/ti,ab
```

```
F1          24  BIOSIS
```

```
F2          5   EMBASE
```

```
. . .  
=> fil biosis; s (Ab5075 or Ab 5075) not (Ab5075 or Ab 5075)/ti,ab
```

```

```

```
=> d ti hit 1-3
```

```
TI  Rescuing Tetracycline Class Antibiotics for the Treatment of  
Multidrug-Resistant Acinetobacter baumannii Pulmonary Infection.
```

```
ORGN Classifier
```

```
Neisseriaceae 06507
```

```
Super Taxa
```

```
Gram-Negative Aerobic Rods and Cocci; Eubacteria; Bacteria;  
Microorganisms
```

```
Organism Name
```

```
Acinetobacter baumannii (species): pathogen, strain-AB0057,  
strain-MS14413, strain-PGC-204089, strain-AB5075
```

```
Taxa Notes
```

```
Bacteria, Eubacteria, Microorganisms
```

Focus on the indexing for strains, i.e. where hits are not found in title and abstract. Biosis and Embase show the most answers.

Biosis indexing often mentions the strain in the organism field.

Use case 3: Use thesauri to collect synonyms for a more comprehensive basic index text search

Summary

- Use EXPAND and database-specific CT hierarchies to look up scientific names used for indexing
- Search controlled terms for precise matches, use relationship codes to include further taxonomic levels
- Consider searching on a broader taxonomic level such as the genus or family
- Expand your search to the basic index when comprehensiveness is the target
- Look up CT hierarchies to create keyword queries including scientific names, their abbreviated form as well as product and lab jargon names
