Record Content

- Bibliographic data and full text of published European patent applications and examined granted European patents since 1978.
- Records contain bibliographic data including patent applicant and inventor, patent, application, priority, and related application data, IPC, CPC, and EPC/ICO classification codes, abstract, and full text of description and claims.
- Records contain bibliographic data, titles in English, French and German, and the original abstract plus the English translation of German and French abstracts, Descriptions and Claims available in German or French are machine translated to English or from equivalent documents.
- Standardized and normalized patent assignee names are searchable in their own fields /PAS and /PAN.
- Numeric values of 59 physical and chemical properties are searchable in about 20,000 variants of the base and additional units within all full text fields in English.
- Keyterms, indexed and displayed in the field /KT, enhance retrieval of relevant results, and make the evaluation of results more efficient. They are useful to broaden search scope more precisely than Basic Index searches.
- Database records comprise all documents published for one application.
- Some of the full text has been created by Optical Character Recognition (OCR) software. Therefore, characters may be misinterpreted, or portions of the text may be incomplete.

File Size

- More than 3.8 million family records with more than 7.2 million publications (04/2021)
- More than 1.62 million front page images (04/2021)

Search and Display Field Codes

If multiple search terms are linked with and AND-operator, all terms are searched in the complete database record, i.e. in all publications referring to one application. For a search in a specific publication of the record, connect the search term and the patent kind code with the (L)-proximity operator, e.g.
S HOLOGRA?(S)?LASER? (L) EPA1/PK limits the search to European applications EPA1.

Fields that allow left truncation are indicated by an asterisk (*).

(1) Numeric search field that may be searched with numeric operators or ranges.
(2) Search with implied (S) proximity is available in this field.
(3) Either STN or Derwent format may be used.
(4) A thesaurus is available in this field.

Super Search Fields

Enter a super search field to execute a search in one or more fields that may contain the desired information. Super search fields facilitate cross-file and multi-file searching. EXPAND may not be used with super search fields. Use EXPAND with the individual field codes instead.

Search Field Name	Search Code	Fields Searched	Search Examples	Display Codes
Application Number Group	/APPS	/AP, /PRN	S EP1995-104274/APPS	AI, PRAI
Patent Assignee Group	/PASS	/PA, /PA.T, /PAS, /PAN	S BASF/PASS	PA, PAS, PAN
Patent Number Group	/PATS	/PN, /RLPN	S EP140038/PN	PI, RLI

Property Fields[1)]

In EPFULL a numeric search for a specific set of physical properties (/PHP) is available within the full text fields in English (TIEN, ABEN, DETDEN, CLMEN as well as English text in TI, AB, CLM, DETD, BI). The numeric values are not displayed as single fields, but highlighted within the hit displays.

Use EXPAND/PHP to search for all available physical properties. A search with the respective field codes will be carried out in all database fields with English text. The /PHP index contains a complete list of codes and related text for all physical properties available for numeric search.

Field Code	Property	Unit	Symbol	Search Examples
/AOS	Amount of substance	Mol	mol	S 10 /AOS
/BIR	Bit Rate	Bit/Second	bit/s	S 8000-10000/BIR
/BIT	Stored Information	Bit	Bit	S BIT > 3 MEGABIT
/CAP	Capacitance	Farad	F	S 1-10 MF/CAP
/CATA	Catalytic Activity	Katal	kat	
/CDN	Current Density	Ampere/Square Meter	A/m^2	S CDN>10 A/M**2
/CMOL	Molarity, Molar Concentration	Mol/Liter	mol/L	S UREA/BI (S) 8/CMOL
/CON	Conductance	Siemens	S	S 1S-3/CON
/DB	Decibel	Decibel	dB	S DB>50
/DEG	Degree	Degree	°	S CYLINDER/BI (S) 45/DEG
/DEN (/C)	Density (Mass Concentration	Kilogram/Cubic Meter	kg/m^3	S 5E-3-10E-3/DEN
/DEQ	Dose Equivalent	Sievert	Sv	S 100/DEQ
/DOA	Dosage	Milligram/Kilogram/Day	mg/kg/day	
/DOS (/LD50)	Dose	Milligram/Kilogram	mg/kg	S DOS>0.8
/DV	Viscosity, dynamic	Pascal * Second	Pa * s	S DV>5000
/ECH (/CHA)	Electric Charge	Coulomb	C	S 0.0001-0.001/ECH
/ECO (/ECND)	Electrical Conductivity	Siemens/Meter	S/m	S ECO>800 S/M (15A) AQUEOUS
/ELC (/ECC)	Electric Current	Ampere	A	S 1-10/ELC
/ELF (/ECF)	Electric Field	Volt/Meter	V/m	S 200/ELF
/ENE	Energy	Joule	J	S DROPLETS (10A) 40 JOULE - 70 JOULE /ENE
/ERE (/ERES)	Electrical Resistivity	Ohm * Meter	Ohm * m	S ERE>0.1
/FOR	Force	Newton	N	S 50 N /FOR

/RSP	Rotational Speed	Revolution/Minute	rpm	S 2 RPM - 100 RPM /RSP (S) ENGINE/BI
/SAR	Area /Surface Area	Square Meter	m^2	S PLATE/BI (S) 10 M**2 - 100 M**2 /SAR
/SOL (/SLB)	Solubility	Gram/100 gram	g/100 g	S SOL>20 G/100G (5A) WATER
/SSAM	Specific Surface Area, Mass	Square Meter/ Kilogram	m2/kg	
/STSC (/ST)	Surface Tension	Joule /Square Meter	J/m^2	S 60 J/M**2/STSC
/TCO (/TCND)	Thermal Conductivity	Watt/Meter * Kelvin	W/m * K	S 1/TCO (S) HEAT?
/TEMP (/T)	Temperature	Kelvin	K	S 20-25/TEMP
/TEX	Tex	Gram/Kilometer	g/km	
/TIM	Time	Second	s	S ?INCUB?/BI (10A) 50 S - 150 S /TIM
/VEL (/V)	Velocity	Meter per Second	m/s	S REDUC?/BI (S) 1E-3-5E-3/VEL
/VELA	Velocity, angular	Radian/Second	rad/s	S VELA>10
/VLR	Volumetric Flow Rate	Cubic Meter/Second	m^3/s	S 1 M**3/S - 2 M**3/S /VLR (S) ABRASIVE
/VOL	Volume	Cubic Meter	m^3	S 1E-8-2E-8/VOL.EX
/VOLT	Voltage	Volt	V	S TENSION/BI (10A) 5E-3 V <VOLT<7E-3 V

(1) Exponential format is recommended for the search of particularly high or low values, e.g. 1.8E+7 or 1.8E7 (for 18000000) or 9.2E-8 (for 0.000000092).

IPC Thesaurus

The classifications, validity and catchwords for the main headings and subheadings from the current (8th) edition of the WIPO International Patent Classification (IPC) manual are available. The classifications from the previous editions (1-7) are also available as separate thesauri. To EXPAND and SEARCH in the thesauri for editions 1–7, use the field code followed by the edition number, e.g. /IPC2, for the 2nd edition. Catchwords are included only in the thesauri for the 8th, 7th, 6th, and 5th editions.

Code	Content	Examples
ADVANCED (ADV)	Advanced Codes for the Core Level IPC Code	E A61K0006-02+ADVANCED/IPC
ALL	All Associated Terms (BT, SELF, NT, RT)	E C01C003-00+ALL/IPC
BRO (MAN)	Complete Class	E C01C+BRO/IPC
BT	Broader Term (BT, SELF)	E C01F001-00+BT/IPC
CORE (COR)	Core Codes for the Advanced Level IPC Code	E G08C0019-22+CORE/IPC
ED	Complete title of the SELF term and IPC manual edition	E C01F001-00+ED/IPC
HIE	Hierarchy Term (Broader and Narrower Term) (BT, SELF, NT)	E C01B003-00+HIE/IPC
INDEX	Complete title of the SELF term	E C01F001-00+INDEX/IPC
KT	Keyword Term (catchwords) (SELF, KT)	E CYANOGEN+KT/IPC
NEXT	Next Classification	E C01C001-00+NEXT5/IPC
NT	Narrower Terms (SELF, NT)	E C01C+NT/IPC
PREVn	Previous Classification (n=1,2…)	E C01C001-12+PREV10/IPC
RT (SIB)	Related Terms (SELF, RT)	E C01C003-20+RT/IPC
TI	Complete Title of the SELF Term and Broader Terms (BT, SELF)	E C01F001-00+TI/IPC

CPC Thesaurus

This thesaurus is available in the /CPC search field. All relationship codes can be used with both the EXPAND and SEARCH commands.

Relationship Code	Content	Search Examples
ALL	All usually required terms (BT, SELF, CODE, DEF)	E C12M0001-005+ALL/CPC
AUTO **(1)**	Automatic relationship (BT, SELF, CODE, DEF)	E G01J003-443+AUTO/CPC
BT	Broader terms (BT, SELF)	E G01J0003-443+BT/CPC
CODE	Classification Code (SELF, CODE)	E CARTRIDGES+CODE/CPC
DEF	Definition (SELF, DEF)	E B65G0045-16+DEF/CPC
HIE	Hierarchy terms (all broader and narrower terms) (BT, SELF, DEF, NT)	E A01B0001+HIE/CPC
KT	Keyword terms (SELF, KT)	E LASER+KT/CPC
MAX	All associated terms	E G01J0003-44+MAX/CPC
NEXT	Next classification within the same class (SELF, NEXT)	E A01B0001-24+NEXT/CPC
NEXT(n)	Next n classification within the same class	E A01B0001-24+NEXT3/CPC
NT	Narrower terms	E G05B0001-04+NT/CPC
PREV	Previous Code within the same class (SELF, PREV)	E G05B0019-00+PREV/CPC
PREV(n)	Previous n classifications within the same class	E G05B0019-00+PREV2/CPC
TI	Complete Title of SELF Term and Broader Terms (BT, SELF)	E G05B0001-03+TI/CPC

(1) Automatic Relationship is SET OFF. In case of SET REL ON, the result of EXPAND or SEARCH without any relationship code is the same as described for AUTO.

DISPLAY and PRINT Formats

Any combination of formats may be used to display or print answers. Multiple codes must be separated by spaces or commas, e.g., D L1 1-5 TI AU. The fields are displayed or printed in the order requested.
The information of the latest publication is displayed by default. To display the content for all levels of the record you can combine all display fields and formats with the qualifier .M except FA, SCAN, and TRIAL.

For displaying a particular publication level of a database record, you can simply add for certain display field the kind code to the appropriate display format, e.g. ALL.A1. Fields that allow this are indicated by a number (2).

Hit-term highlighting is available for all fields. Highlighting must be ON during SEARCH to use the HIT, KWIC, and OCC formats. The default display format is STD.M, i.e., all publication levels of one family in the STD format.

Format	Content	Examples
AB (ABS) **(2)**	Abstract (German, English, French) for all publication levels	D AB.M
ABDE **(2)**	Abstract (German)	D ABDE.M
ABEN **(2)**	Abstract (English)	D ABEN.M
ABFR **(2)**	Abstract (French)	D ABFR.M
AG	Agent	D AG
AG.CNY	Agent, Country	D AG.CNY

(1) Application and patent numbers are available in STN and Derwent format. The format for DISPLAY, PRINT, SELECT, and SORT is set using the SET PATENT command. STN is the default format. Enter SET PAT DERWENT to change to the Derwent format. To reset to the STN format, enter SET PAT STN.

(2) You can combine this display field with the qualifier .PK (Patent Kind Code) to display the content for a certain publication level of a record, e.g. STD.A1

(3) Custom display only.

(4) SCAN must be specified on the command line, i.e., D SCAN or DISPLAY SCAN.

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

You can combine all fields except FA with the qualifier .M to SELECT/ANALYZE the content of all publication levels.

ABSTRACT (ENGLISH):
Equivalent from US2016068020A1
Radial-type pneumatic tires for vehicles having a radial carcass, a profiled tire tread, a belt and a single-layer or multi-layer bandage covering the belt, which bandage has reinforcements extending in the circumferential direction of the tire and includes at least one thread made of a textile material, such as polyamide, polyester or rayon. The thread has a fineness of X2270700 dtex.

MAIN CLAIM (ENGLISH):
[CLM0001] Pneumatic vehicle tyre of a radial type of construction comprising a radial carcass, a profiled tread, a breaker belt and a single-ply or multi-ply belt bandage covering the belt and comprising cords running in the circumferential direction of the tyre, which consist of a twisted yarn of polyamide 6.6 or a number of twisted yarns of polyamide 6.6,characterizedin that the yarn or the yarns has or have a fineness of 700 dtex and the cords have the construction 1.times.1, 1.times.2 or 1.times.3.

MAIN CLAIM (FRENCH):
[CLM0001] Pneumatique de vehicule de type radial avec une carcasse radiale, une bande de roulement profilee, une ceinture et un bandage de ceinture en une ou plusieurs couche(s) recouvrant celle-ci avec des cordes s'etendant dans la direction peripherique du pneumatique, qui se composent d'un fil retordu en polyamide 6.6 ou de plusieurs fils retordus en polyamide 6.6, caracterise en ce que le fil ou les fils presente/presentent une finesse de 700 dtex et les cordes presentent la construction 1x1, 1x2 ou 1x3.

MAIN CLAIM (GERMAN):

EPFULL

[CLM0001] Fahrzeugluftreifen in Radialbauart mit einer Radialkarkasse, einem profilierten Laufstreifen, einem Guertel und einer diesen bedeckenden ein- oder mehrlagigen Guertelbandage mit in Umfangsrichtung des Reifens verlaufenden Korden, welche aus einem getwisteten Garn aus Polyamid 6.6 oder aus mehreren getwisteten Garnen aus Polyamid 6.6 bestehen,dadurch gekennzeichnet,dass das Garn bzw. die Garne eine Feinheit von 700 dtex aufweist bzw. aufweisen und die Korde die Konstruktion 1x1, 1x2 oder 1x3 aufweisen.

KEYTERMS:
multi-layer bandage; pneumatic vehicle tyre; pneumatic tire; bandage ply; textile material; high density bandage cord; material strip; nylon cord; cord decitex yarn; twisted yarn; tread belt; belt bandage; twist factor; breaker belt; mono-filament yarn; cord impregnated tacky; reinforcement finalrotated multifilament yarn; bandage layer thickness; weight bandage layer; art bandage layer; superimposed layer bandage; high speed performance; art comparable bandage; bandage rubber; heat buildup; radial type; mechanical strength; wound bandage; ensure intimate rubber penetration; finished tire

Machine translation

ABEN

Method for preserving fresh food products, wherein a system is provided for creating an envelope around each loaded (P) pallet/carrier (E) into products, a system located within a storage chamber for storing the products, characterized in that the envelope creation system implements the following means: - the envelope creation system comprises at least one (S) station located within the storage chamber for storing the products, a station which comprises a (E) (preferably reusable) envelope and which comprises means, automatic or manual, for lowering the envelope on a product loaded pallet/carrier and raising the envelope on demand, for example to allow access to products stored on the considered pallet/carrier (E). - the system includes means for scanning the sealed enclosure so created within the enclosure with a selected gas mixture suitable for preservation of the products involved.

Original

ABFR

Procede de conservation de produits alimentaires frais, selon lequel on dispose d'un systeme de creation d'une enveloppe autour de chaque palette/support (P) charge(e) en produits, systeme localise au sein d'une chambre de stockage destinee a stocker les produits, se caracterisant en ce que le systeme de creation d'une enveloppe met en oeuvre les moyens suivants : - le systeme de creation d'une enveloppe comprend au moins une station (S), localisee au sein de la chambre de stockage destinee a stocker les produits, station qui comprend une enveloppe (E) (preferentiellement reutilisable) et qui comprend des moyens, automatiques ou manuels, pour abaisser l'enveloppe sur une palette/support charge en produits et remonter l'enveloppe sur demande, par exemple pour permettre l'acces aux produits stockes sur la palette/support considere(e); - le systeme comprend des moyens

permettant de balayer l'enceinte hermetique ainsi creee a l'interieur de l'enveloppe avec un melange de gaz choisi adapte pour la conservation des produits concernes.

DETDEN

[DESC0001] The present invention relates to the field of agri-food.

[DESC0002] The agri-food market is full-mutation. Consumers currently display a willingness to consume more in addition to fresh produce, which are associated with the notion of vitality, wellness and health.

[DESC0003] This trend is also strengthened by a loss of confidence in the processed products ("processability") by the agri-food industry, in particular, due to the different food scanners which are sweetened in recent years (e.g. the known cases of the lasagne to the horse's meat are known, contaminated eggs and meats etc.). It is safe to the safety of a food or to estimate that the food has positive health effects even if quality criteria, which both exceed that of its simple gustatory dimension. Thus, the "fresh" has become an integral market, by demonstrating the success of the specialized signs in the past recent years, or the companies for delivering fresh produce whose development is dramatic.

.

[DESC0017] As mentioned above, there is a state of the technique of interest to implement a modified atmosphere on a pallet via an envelope. But is included in the prior art, the present invention attaches to farthest, and provides a convenient, convenient and automated solution. For this purpose, the invention provides for the implementation of a station for creating an envelope, station located within the storage chamber, which station comprises means for lowering and raising the casing as necessary, and which comprises means for sweeping the inside of the casing with a suitable gas. A solution which is not evoked or suggested by the prior art.

[DESC0018] For example, the document may be examined. US - 5 438 917A a method of ripening fruit stored on a pallet, by bringing the fruits into contact with a cooled air atmosphere, with the presence of a partition ("partition"), enclosing the fruit boxes, the "partition" does not admit air and is sealingly attached to a.10 suction hood. In this document, there is no need for a station for actuating the movement of a fluid envelope, for lowering and raising as much as necessary around the pallet, the station further comprising means for scavenging gas from the inside of the envelope.

[DESC0019] Still illustratively, the document may be examined. WOOOOOOOOO19/122603. (on the name of the applicant): this prior art shows the existence of previous methods and devices of interest to the establishment of controlled atmospheres within envelopes enclosing pallets, but this document does not implement a station in the direction of the present invention, for envelope management and gas injection.

CLMEN

[CLM0001] A method of preserving fresh food products, wherein the products are positioned on a support, for example on a (P) pallet or other carrier, or to the ground, pallets/supports for (e) s when loaded (E) s to be stored (E) S to be stored (E) S to be stored around each loaded pallet/carrier (E) by providing an envelope adapted to receive therein a preservation atmosphere of the products concerned, wherein a system is provided for creating an envelope around each loaded pallet/carrier (E) into products, a system located within the storage chamber. characterized by implementing the following measures: - the envelope creation system comprises at least one (S) station located within the storage chamber for storing the products, a station which comprises a (E) envelope and which comprises means, automatic or manual, for lowering the envelope on a product loaded pallet/carrier and raising the envelope on demand, for example to allow access to products stored on the considered pallet/carrier (E). - the system includes means for scanning the sealed enclosure so created within the enclosure with a selected gas mixture suitable for preservation of the products involved.
[CLM0002] The method according to claim 1. characterized in that during scanning, air is sucked up by the station from above the structure to prevent overpressure in the enclosure, and discharged to the outside.
[CLM0003] Method according to claim 1 or 2. characterized in that one or

more of the following parameters is regulated during a storage phase of the products under such an envelope: the oxygen content in the inner enclosure to the shell, the content of CO2 in the enclosure internal to the envelope, hygrometry in the enclosure internal to the envelope, and the temperature in the enclosure internal to the envelope.
[CLM0004] Method according to one of the preceding claims. characterized in that when it is necessary to access the products stored on a packaged pallet, the replacement is manually or automatically activated by air of the protective atmosphere in vigour in the lowered envelope, purged air which is blown outward is then manually or automatically actuated, for example when safety gas thresholds within the envelope are reached.
[CLM0005] Method according to one of the preceding claims. characterized in that the station is provided with a man-machine interface that includes conservation recipes for each product or category of products that may be stored on the pallets.
[CLM0006] Installation for preserving fresh food products, in which the products are positioned on a support, for example on a (P) pallet or other support or to the ground, pallets/supports for (e) s after being loaded (E) s to be stored (E) s in a refrigerated storage chamber, and wherein a casing is installed around each loaded pallet/carrier (E) into products, installation comprising a system for creating a (E) envelope around each pallet/carrier, a system located within the storage chamber. characterized in that the envelope creation system comprises the following means: - the envelope creation system comprises at least one (S) station located within the chamber for storing the products, a station which comprises a (E) envelope and which comprises means, automatic or manual, for lowering the envelope on a loaded pallet/carrier (E) by products and raising the envelope on demand, for example to allow access to products stored on the considered pallet/carrier (E). - the system includes means for scanning the sealed enclosure so created within the enclosure with a selected gas mixture, suitable for preservation of the products concerned.

DETDFR

[DESC0001] La presente invention concerne le domaine de l'agroalimentaire.

[DESC0002] Le marche de l'agroalimentaire est en pleine mutation. Les consommateurs affichent aujourd'hui une volonte de consommer de plus en plus de produits frais, qui sont associes a la notion de vitalite, de bien-etre et de sante.

[DESC0003] Cette tendance est egalement renforcee par une perte de confiance dans les produits transformes (ŕ processes ĥ) par l'industrie agroalimentaire, due en particulier aux differents scandales alimentaires qui se sont succedes ces dernieres annees (on citera les cas bien connus des lasagnes a la viande de cheval, des oeufs et viandes contamines etc...). Etre sur de l'innocuite d'un aliment ou estimer que ce dernier a des effets positifs pour la sante sont meme devenus des criteres de qualite, qui, a eux deux, depassent celui de sa simple dimension gustative. Le ŕ frais ĥ est ainsi devenu un marche a part entiere, en temoignent le succes des enseignes specialisees dans le frais apparues ces dernieres annees, ou encore les entreprises de livraison de produits frais dont le developpement est spectaculaire.

[DESC0004] Mais si les consommateurs veulent manger frais, 82% d'entre eux sont aujourd'hui insatisfaits de la qualite des fruits et legumes qu'ils achetent en grande et moyenne surface de distribution. Ces clients notent tout particulierement le manque de gout et de maturite des produits, la presence de produits abimes sur les etals et leur courte duree de vie.

.
.
.

[DESC0018] On pourra par exemple examiner le document US-5 438 917A qui decrit un procede de murissement de fruits stockes sur une palette, par mise en contact des fruits avec une atmosphere d'air refroidi, avec la presence d'une cloison (ŕ partition ĥ), enserrant les boites de fruits, cloison ŕ n'admettant aucun air et etant fixee de maniere etanche a une hotte d'aspiration.... ĥ. En aucune maniere ce document ne decrit la presence d'une station d'actionnement du mouvement d'une enveloppe fluide, pour l'abaisser et la remonter autant que necessaire autour de la palette, station comprenant de plus

des moyens de balayage gazeux de l'interieur de l'enveloppe.

[DESC0019] Toujours a titre illustratif on pourra examiner le document WO2019/122603A1 (au nom de la Demanderesse) : Ici encore cet art anterieur montre l'existence de procedes et dispositifs anterieurs s'interessant a la mise en place d'atmospheres controlees a l'interieur d'enveloppes enserrant des palettes, mais ce document ne met pas en oeuvre de station au sens de la presente invention, pour la gestion de l'enveloppe et de l'injection de gaz.

CLMFR

[CLM0001] Procede de conservation de produits alimentaires frais, selon lequel les produits sont positionnes sur un support, par exemple sur une palette (P) ou autre support voire au sol, palettes/supports destine(e)s une fois charge(e)s a etre stocke(e)s dans une chambre de stockage qui peut etre refrigeree, et ou l'on met en place autour de chaque palette/support charge(e) en produits une enveloppe apte a recevoir en son interieur une atmosphere de conservation des produits concernes, selon lequel on dispose d'un systeme de creation d'une enveloppe autour de chaque palette/support charge(e) en produits, systeme localise au sein de la chambre de stockage, se caracterisant par la mise en oeuvre des mesures suivantes : - le systeme de creation d'une enveloppe comprend au moins une station (S), localisee au sein de la chambre de stockage destinee a stocker les produits, station qui comprend une enveloppe (E) et qui comprend des moyens, automatiques ou manuels, pour abaisser l'enveloppe sur une palette/support charge en produits et remonter l'enveloppe sur demande, par exemple pour permettre l'acces aux produits stockes sur la palette/support considere(e); - le systeme comprend des moyens permettant de balayer l'enceinte hermetique ainsi creee a l'interieur de l'enveloppe avec un melange de gaz choisi adapte pour la conservation des produits concernes.
[CLM0002] Procede selon la revendication 1 , se caracterisant en ce que durant le balayage, l'air est aspire par la station par le haut de la structure pour eviter toute surpression dans l'enceinte, et evacue vers l'exterieur.
[CLM0003] Procede selon la revendication 1 ou 2 , se caracterisant en ce que l'on regule l'un ou plusieurs des parametres suivants au cours d'une phase de stockage des produits sous une telle enveloppe : la teneur en oxygene dans l'enceinte interne a l'enveloppe, la teneur en CO2 dans l'enceinte interne a l'enveloppe, l'hygrometrie dans l'enceinte interne a l'enveloppe, et la temperature dans l'enceinte interne a l'enveloppe.
[CLM0004] Procede selon l'une des revendications precedentes , se caracterisant en ce que lorsqu'il est necessaire d'acceder aux produits stockes sur une palette sous enveloppe, on actionne, manuellement ou automatiquement, le remplacement par de l'air de l'atmosphere protectrice en vigueur dans l'enveloppe abaissee, air purge qui est souffle vers l'exterieur, puis l'on actionne, manuellement ou automatiquement, la remontee de l'enveloppe, par exemple quand des seuils gazeux de securite a l'interieur de l'enveloppe sont atteints.
[CLM0005] Procede selon l'une des revendications precedentes , se caracterisant en ce que la station est munie d'un Interface Homme Machine qui comporte des recettes de conservation pour chaque produit ou categorie de produits pouvant etre stockes sur les palettes.
[CLM0006] Installation de conservation de produits alimentaires frais, conservation au cours de laquelle les produits sont positionnes sur un support, par exemple sur une palette (P) ou autre support voire au sol, palettes/supports destine(e)s une fois charge(e)s a etre stocke(e)s dans une chambre de stockage pouvant etre refrigeree, et ou une enveloppe est installee autour de chaque palette/support charge(e) en produits, installation comprenant un systeme de creation d'une enveloppe (E) autour de chaque palette/support, systeme localise au sein de la chambre de stockage, se caracterisant en ce que le systeme de creation d'une enveloppe comporte les moyens suivants : - le systeme de creation d'une enveloppe comprend au moins une station (S), localisee au sein de la chambre destinee a stocker les produits, station qui comprend une enveloppe (E) et qui comprend des moyens, automatiques ou manuels, pour abaisser l'enveloppe sur une palette/support charge(e) en produits et remonter l'enveloppe sur demande, par exemple pour permettre l'acces aux produits stockes sur la palette/support considere(e); - le systeme comprend des moyens permettant de balayer l'enceinte hermetique ainsi creee a l'interieur de l'enveloppe avec un melange de gaz choisi, adapte pour la conservation des produits concernes.
