(1) There is a thesaurus associated with this field.

(2) Numeric search field that may be searched with numeric operators or ranges.

Controlled Term (/CT) Thesaurus

A thesaurus is present for the Controlled Term (/CT) field in IFIREF. When you search a code or text term in this field, the system automatically echoes the code and its definition.

You may also use the thesaurus to find a particular code or its definition. To display code definitions, use the EXPAND command with a code followed by +ALL and the field code. To display the corresponding code, use EXPAND with text followed by +ALL and the field code.

Only the relationship code +ALL may be used.

Relationship Code	Content	Example
ALL	Code and its definition (SELF, UN, CT)	S POLYISOBUTYLENE/CT E 04220+ALL/CT

IFIREF**Fragment Code (/FG) Thesaurus**

A thesaurus is present for the Fragment Code (/FG) field in IFIREF. When you search a code or text term in this field, the system automatically echoes the code and its definition.

You may also use the thesaurus to find a particular code or its definition. To display code definitions, use the EXPAND command with a code followed by +ALL and the field code. To display the corresponding code, use EXPAND with text followed by +ALL and the field code.

Only the relationship code +ALL may be used.

Relationship Code	Content	Example
ALL	Code and its definition (SELF, UN, CT)	S 30038/FG E CARBON, 1-8 (M) (STO)+ALL/FG

Uniterm (/UN) Thesaurus

A thesaurus is present for the Uniterm (/UN) field in IFIREF. When you search a code or text term in this field, the system automatically echoes the code and its definition.

You may also use the thesaurus to find a particular code or its definition. To display code definitions, use the EXPAND command with a code followed by +ALL and the field code. To display the corresponding code, use EXPAND with text followed by +ALL and the field code.

Only the relationship code +ALL may be used.

IFIREF**SELECT, ANALYZE, and SORT Fields**

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

Field Name	Field Code	ANALYZE/ SELECT (1)	SORT
